OPERATION CHAIN REACTION

The National Intellectual Property Rights Coordination Center leads the federal government’s response to intellectual property theft, a crime that costs American industries lost revenue and jobs every year. Operation Chain Reaction (OCR) is an HSI-led task force that proactively targets counterfeit goods entering the U.S government supply chain. By leveraging public-private partnerships, innovative data analytics, and the combined expertise of 17 member agencies, OCR ensures the practical execution of supply chain risk management principles.

MISSION STATEMENT & LINES OF EFFORT

The mission of OCR is to provide comprehensive, cradle-to-grave supply chain risk management across the federal government and Department of Defense (DoD). To drive meaningful results, OCR focuses on the following lines of effort (LOEs):

- LOE 1: Revitalize key public and private partnerships
- LOE 2: Modernize existing infrastructure and processes
- LOE 3: Integrate and analyze inter-agency data sources
- LOE 4: Identify, neutralize, and exploit supply chain threats

ABOUT

OCR was conceived in June 2011 to combat the threat of counterfeit microelectronics in the DoD supply chain. OCR was focused on microelectronics due to the significant health and safety threat, the ease of counterfeiting, and the potential severe consequences posed to defense and cyber security systems. Today, OCR has evolved into a whole of government approach to supply chain security.
